

# State St Traffic

Songyang Cheng, Mianzhi Huang, Nelson Linscott, Shou  
Kurosu

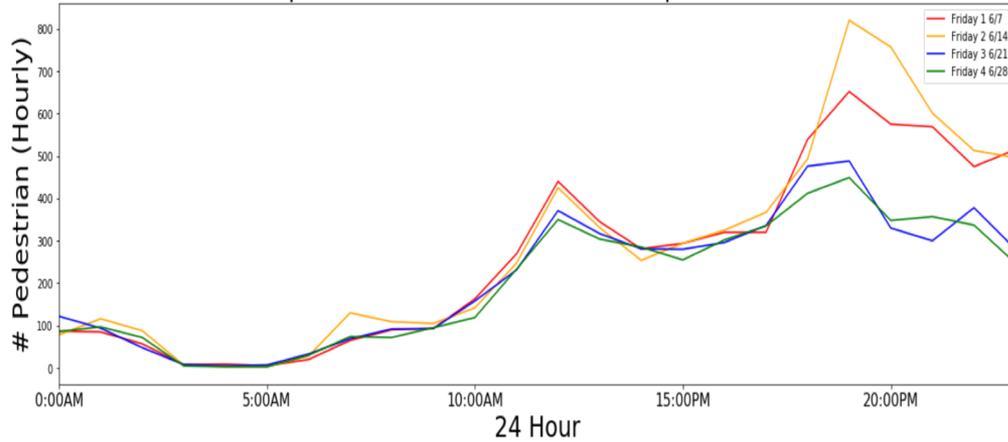

# Pedestrian Flow

1. One peak around 12 pm - 2 pm on both Saturday and Sunday.

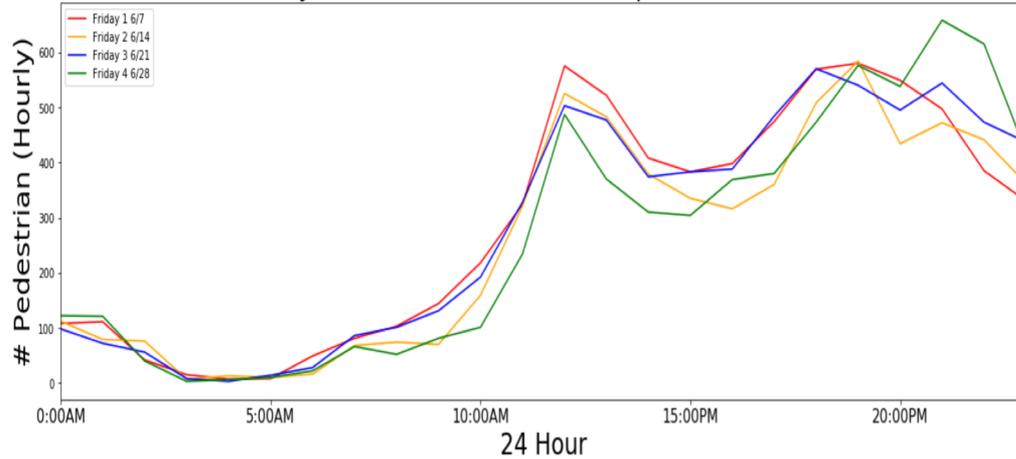

Two peaks, one around 12 pm and the other around 6 pm, from Monday to Friday. (commuting)

1. The number of people who walk on Saturday is almost as **twice** large as the number who walk on weekdays.

2018 September FRIDAYS Pedestrians Comparison in 24 Hours

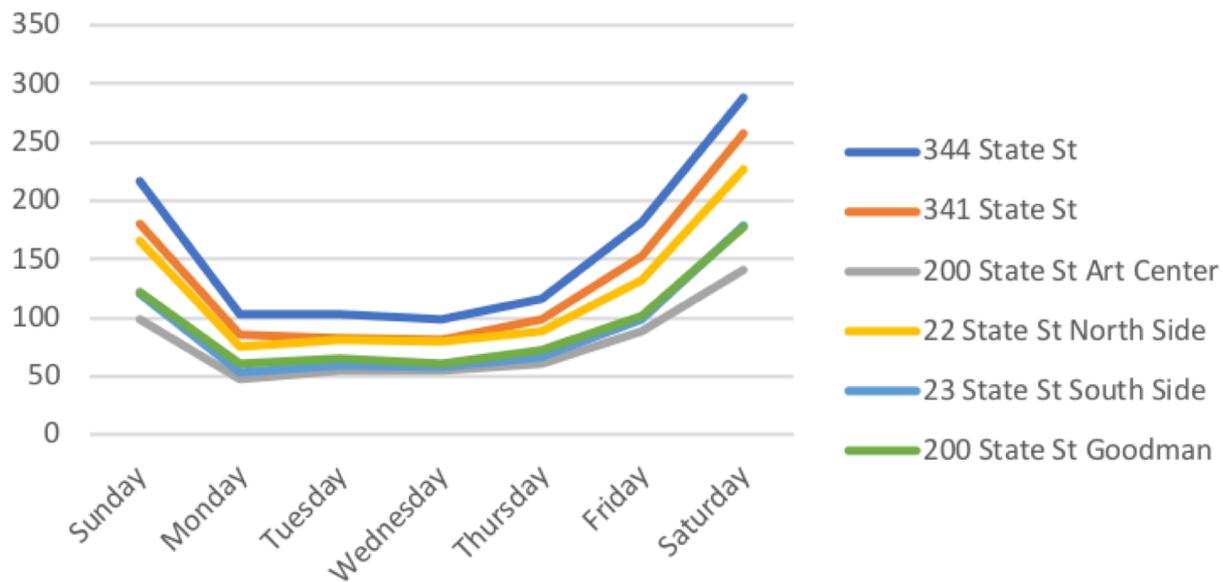

2019 June FRIDAYS Pedestrians Comparison in 24 Hours

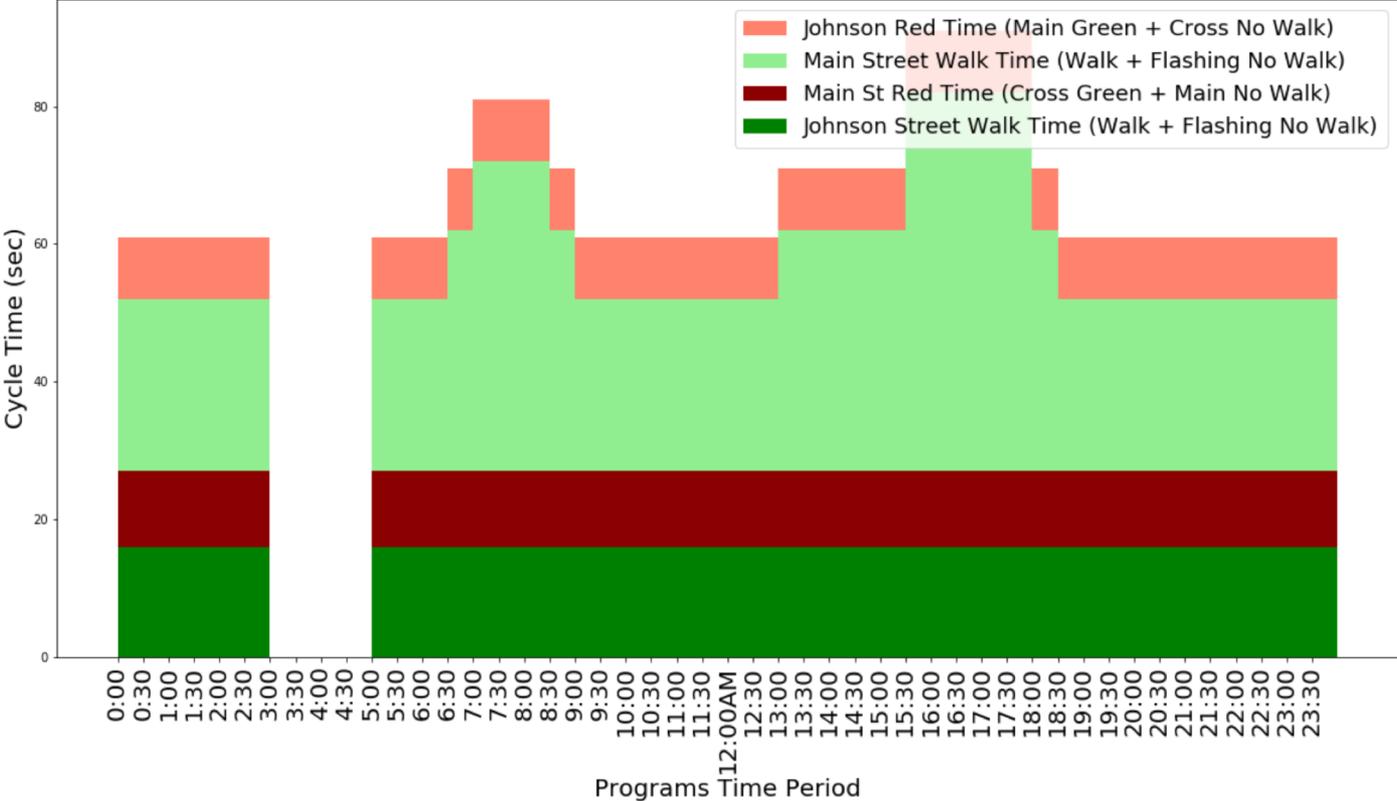

Patterns on Friday in 2018 Sep and 2019 June  
Indicate a need to focus on controls based on Friday night variations

## Non-Busy Hours (Midnight-7am) Average Pedestrian Counts Based off Day of Week

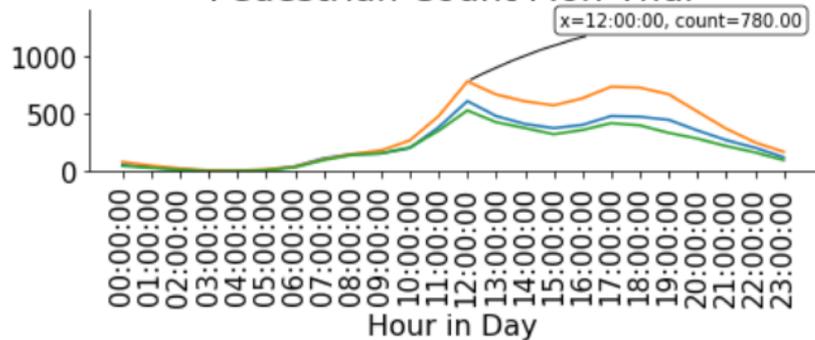

State and Johnson - Main Street Walk Time and Red Light Friday

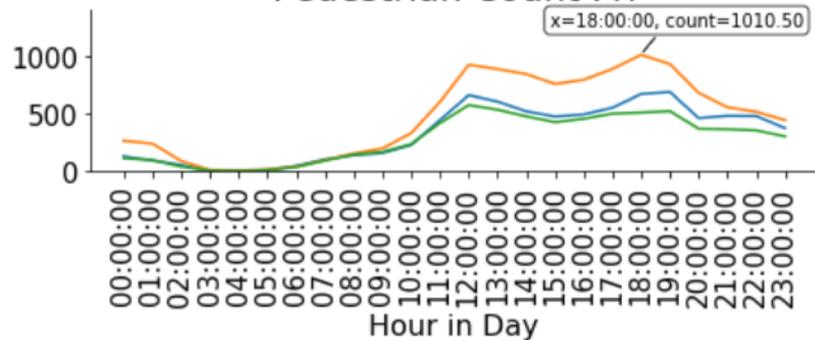

Pedestrian Count

### Pedestrian Count Mon-Thur

Pedestrian Count

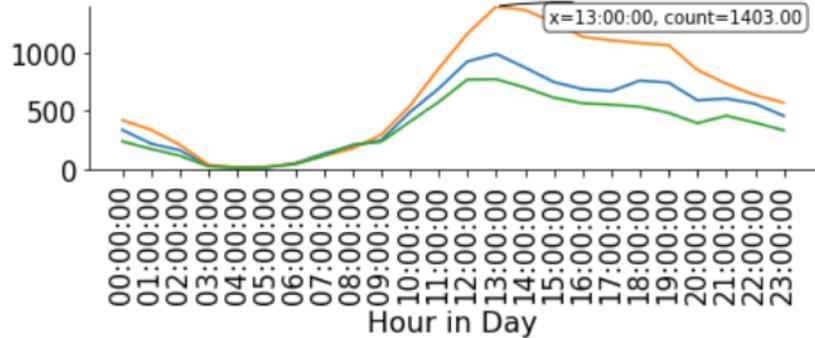

### Pedestrian Count Fri

- Dayton
- Gorham
- Johnson

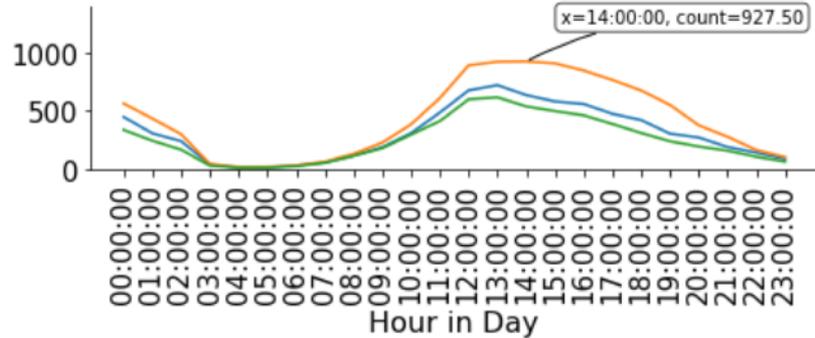

Pedestrian Count

### Pedestrian Count Sat

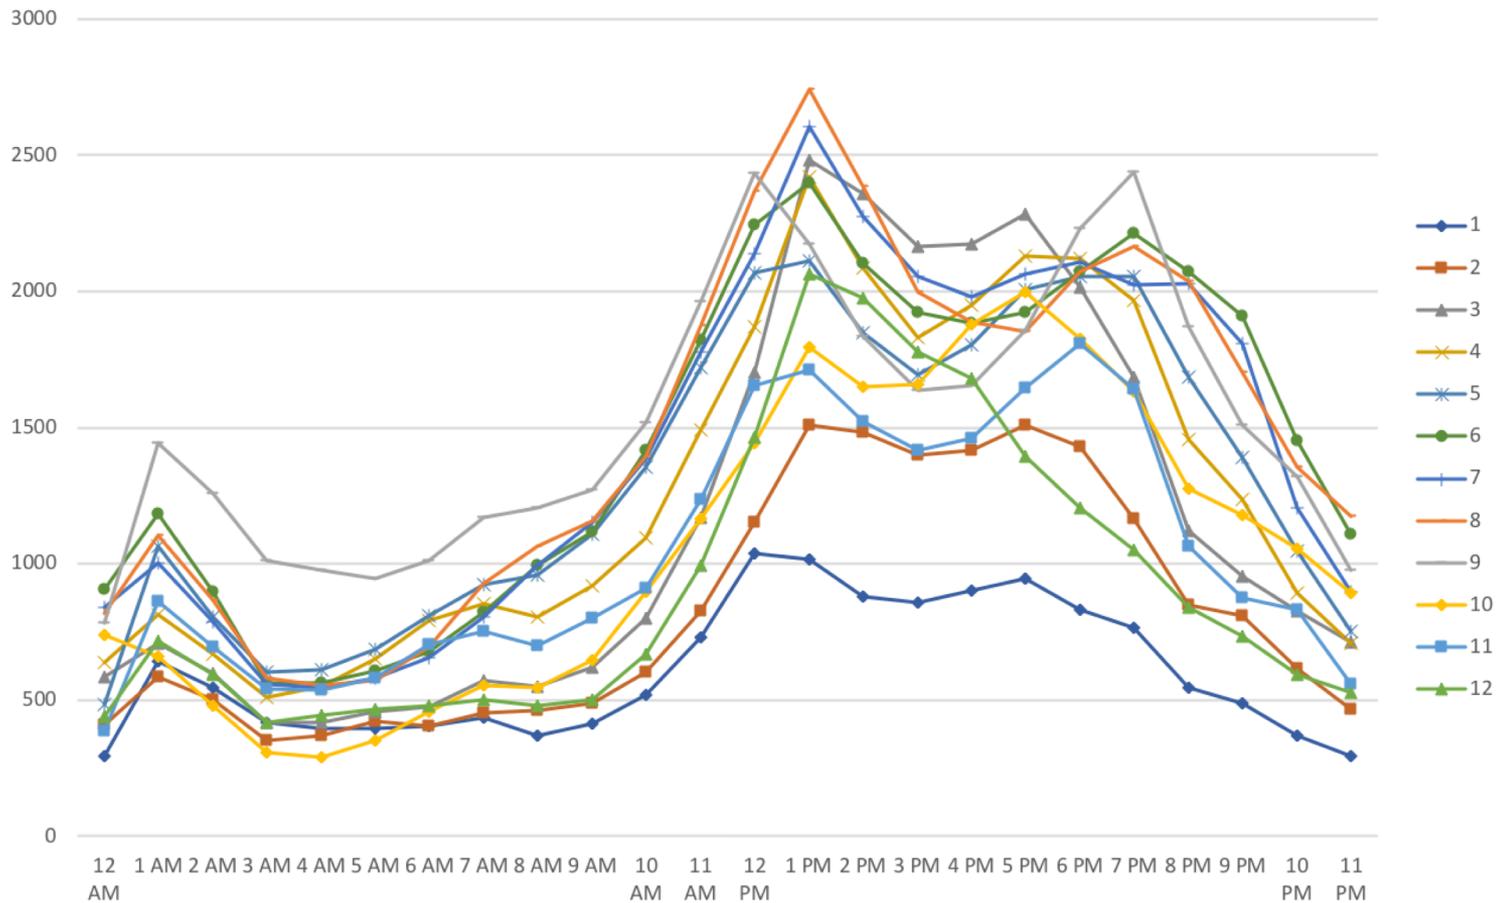

Pedestrian Count

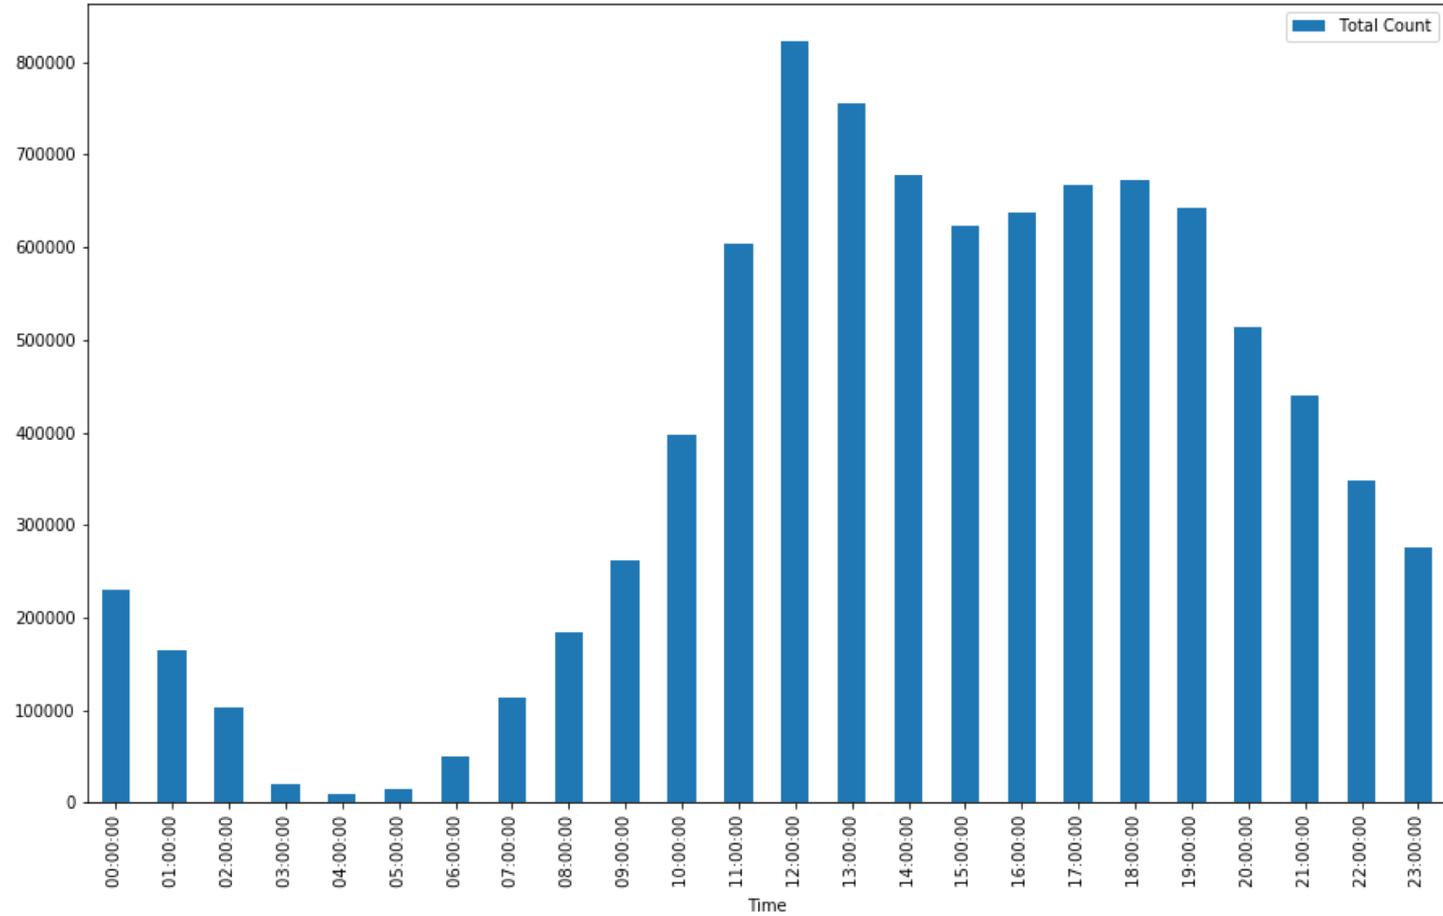

### Pedestrian Count Sun

### Average Pedestrians at Each Time of Day for Each Month

Total Count of Pedestrians From Dataset (2018-2019)

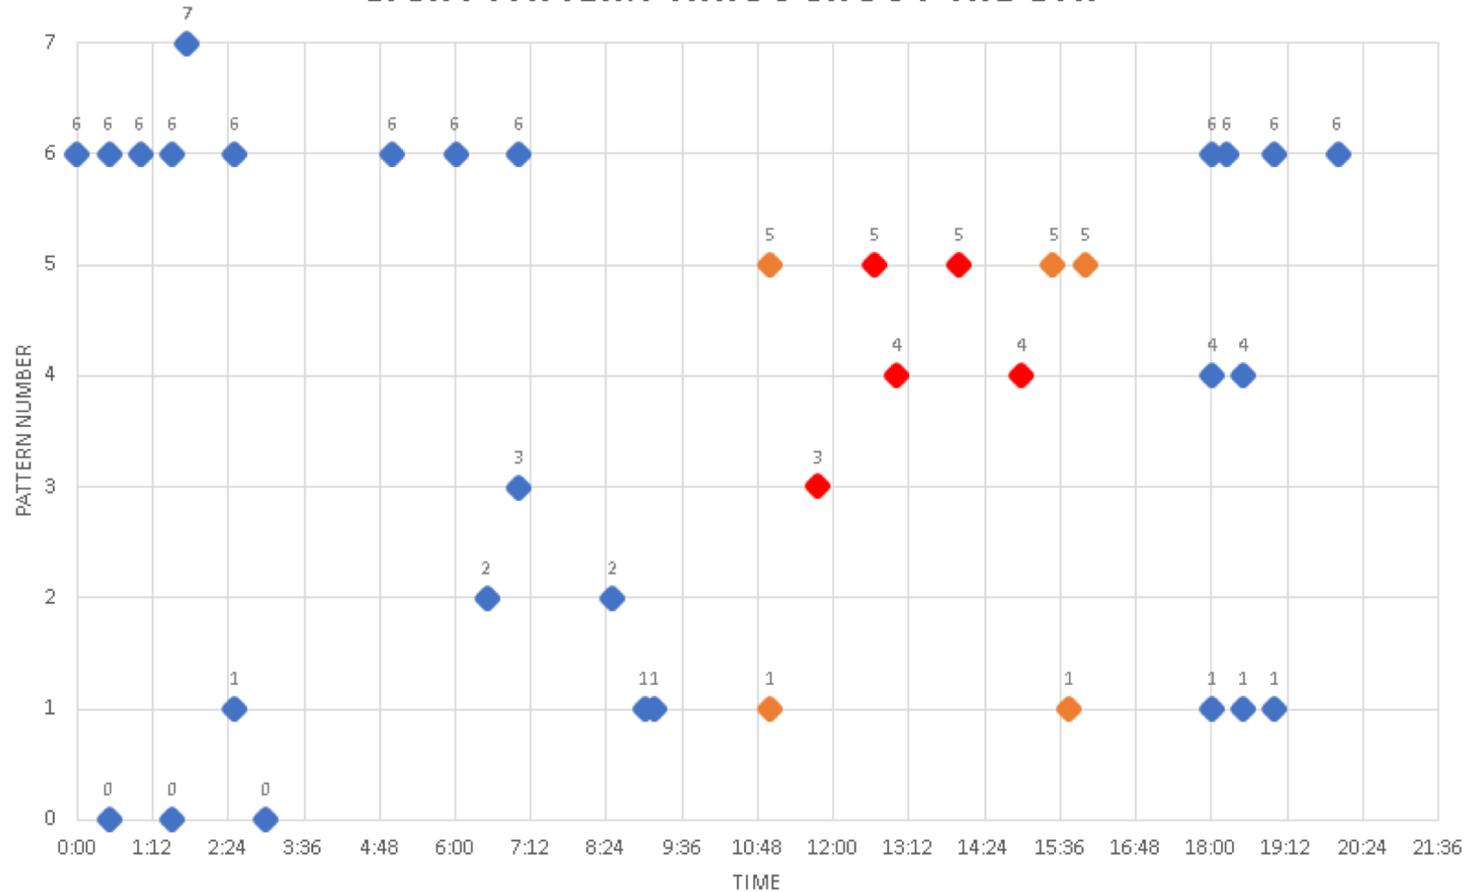

# Green Lights Cycle

Go across Main Street(Dayton/Gorham/Johnson) = go along State St  
wait for a long time.

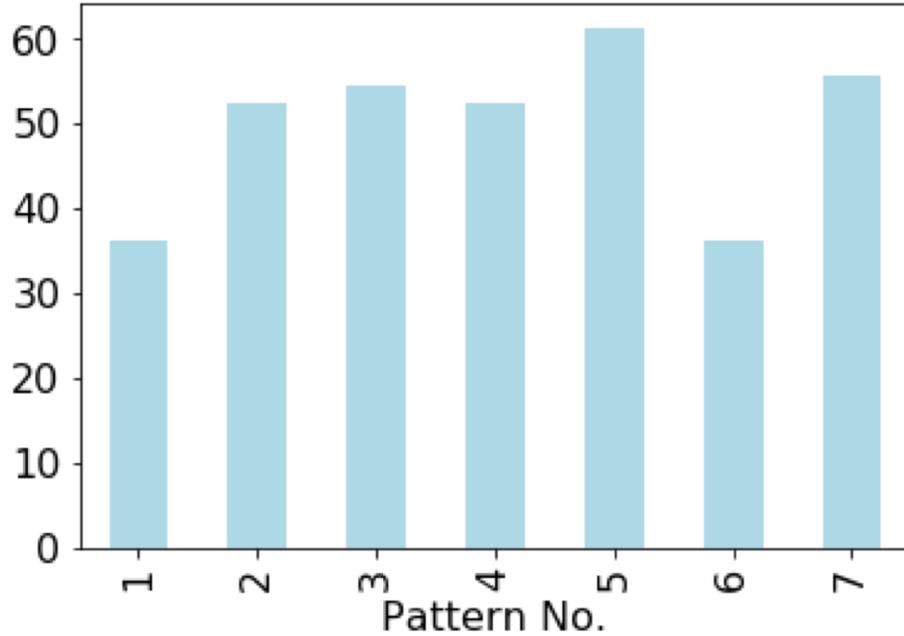

about **three** or **four** times than the other way around

## LIGHT PATTERN THROUGHOUT THE DAY

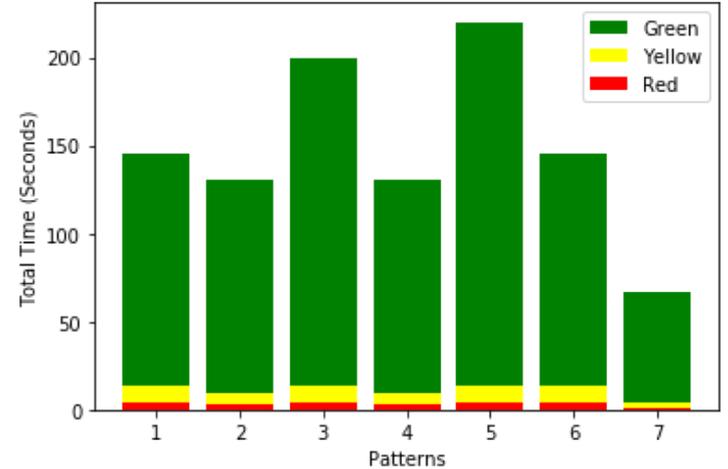

Average Main Street Walk Time (s)

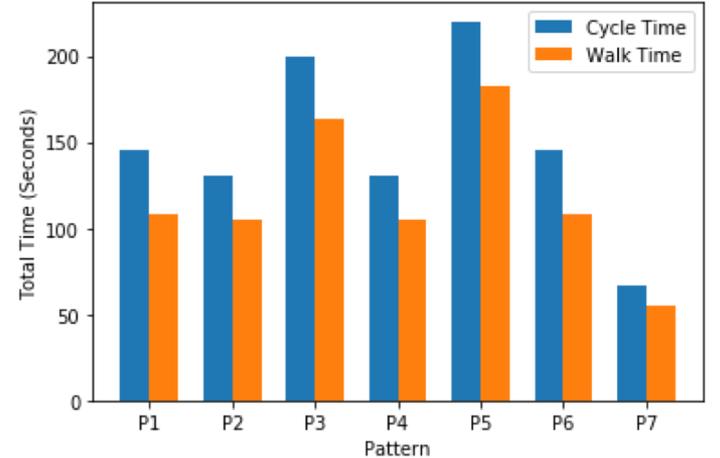

Average Walk Time by Pattern

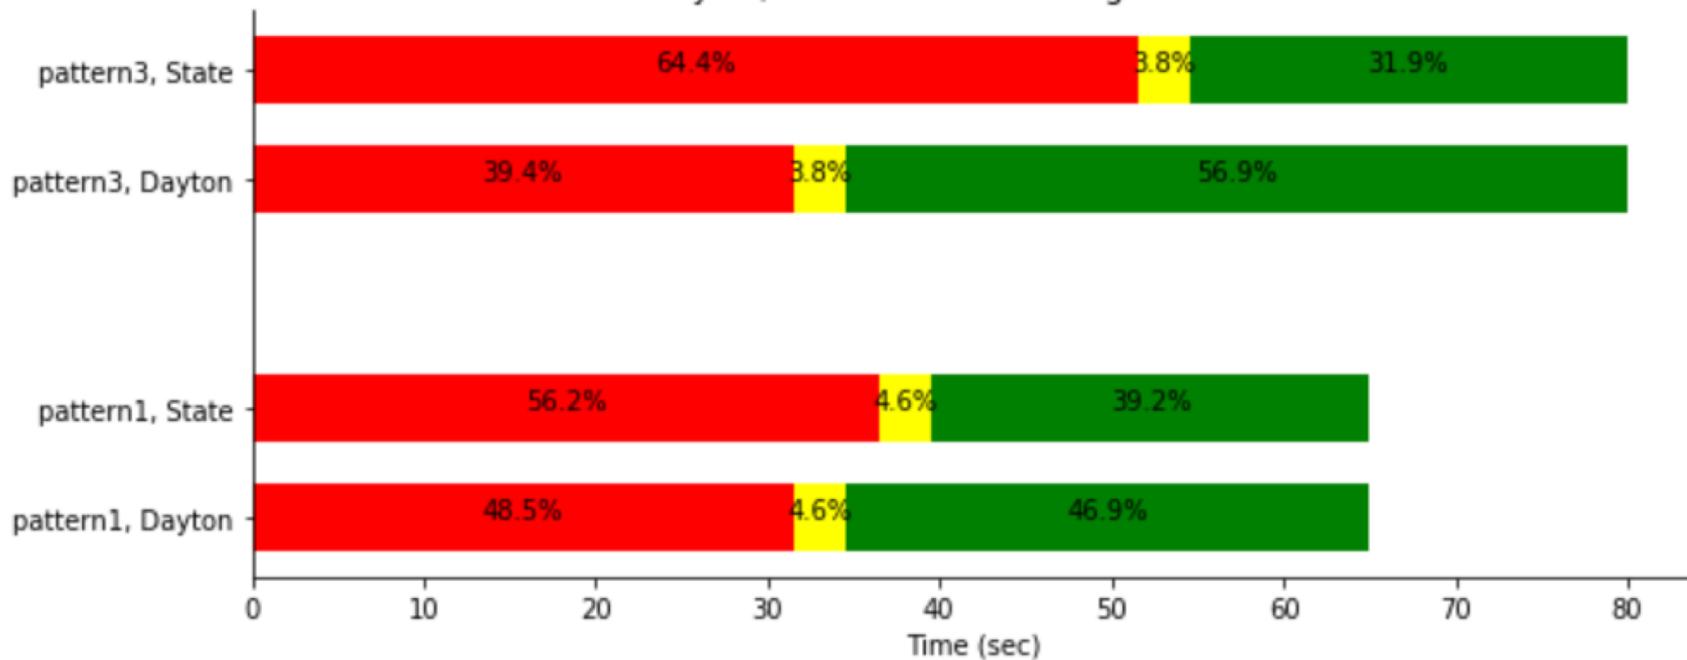

Main Street Total Cycle Time by Traffic Light Color

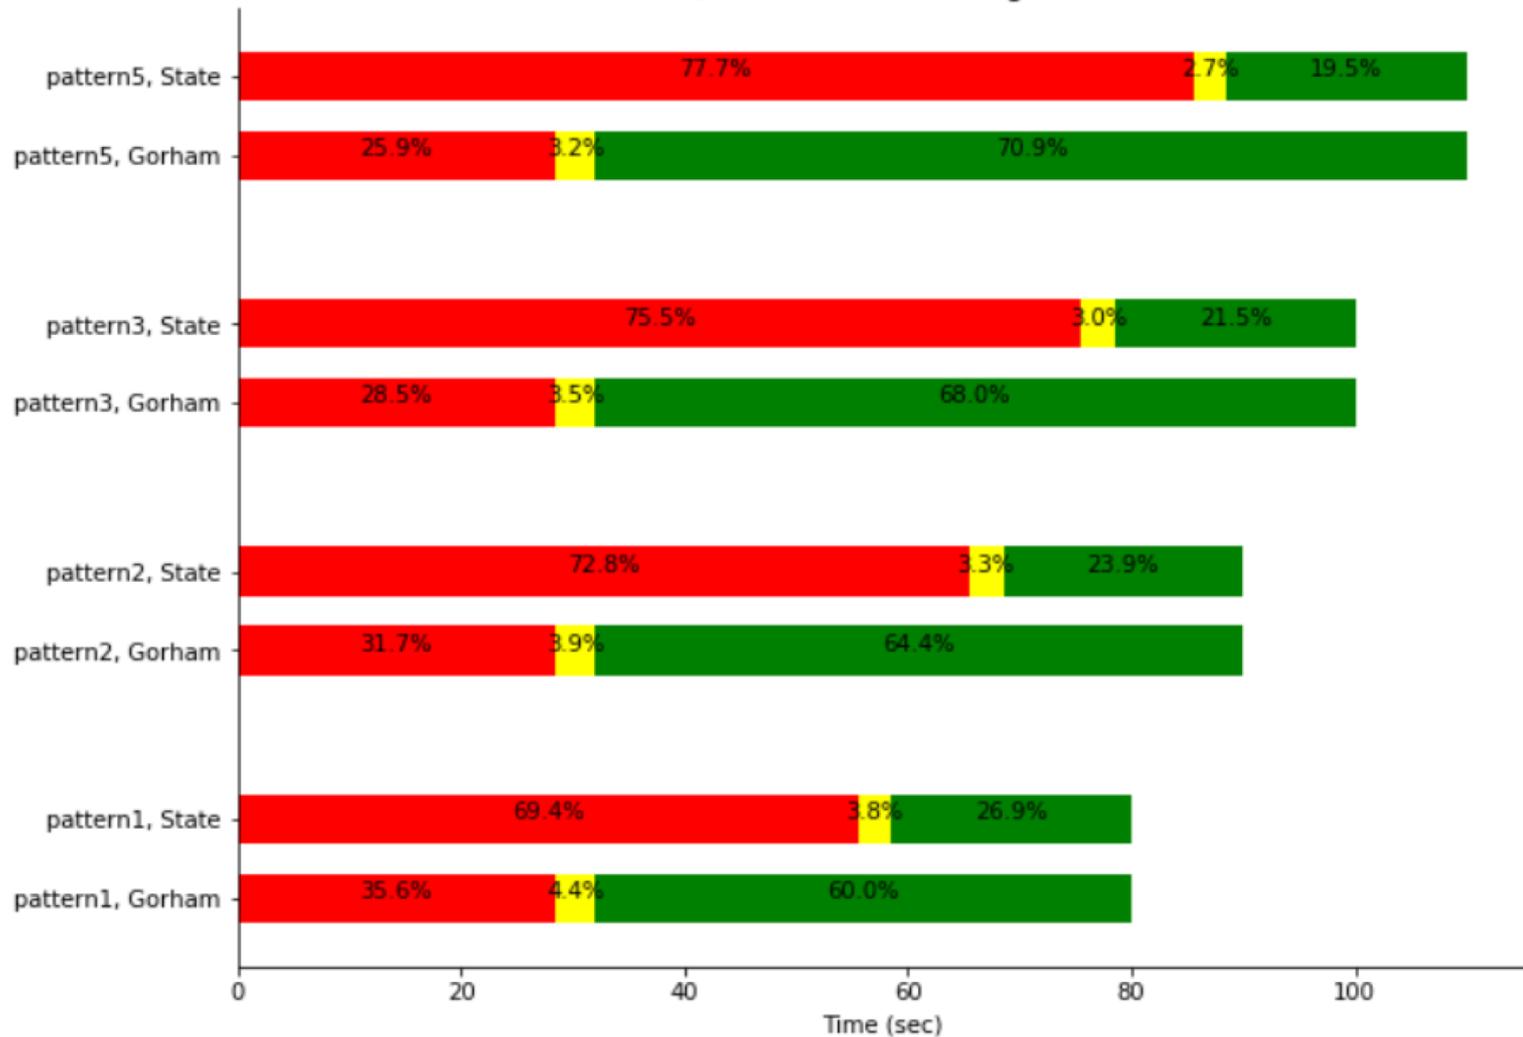

Total Cycle Time vs. Walk Time of State Street Patterns

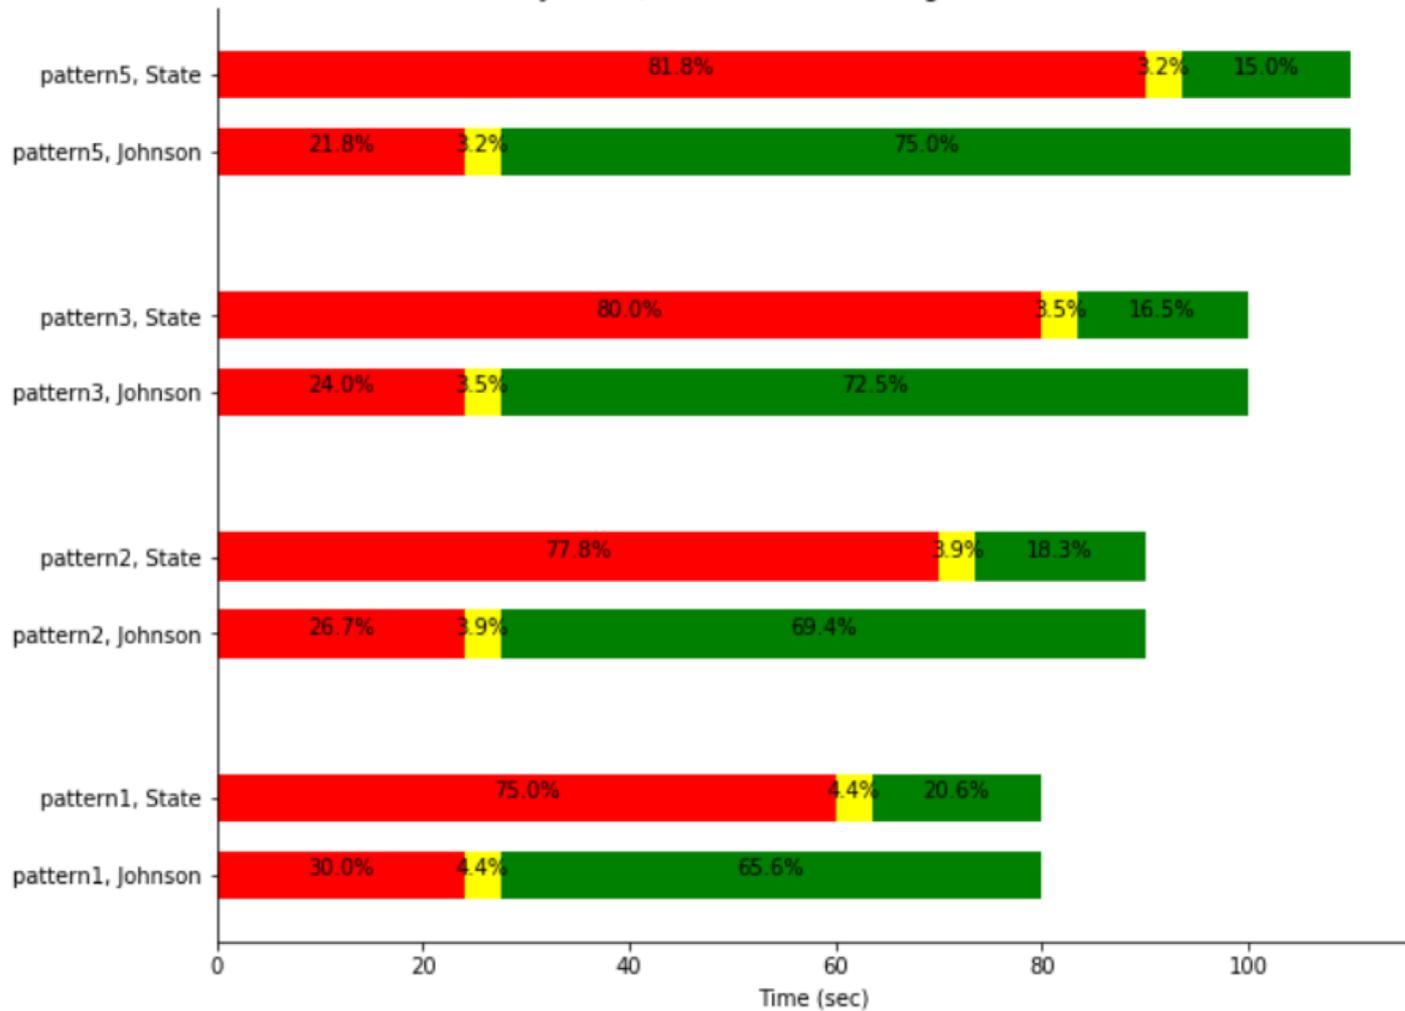

### Dayton/State Street Traffic Lights Pattern

# Gorham/State Street Traffic Lights Pattern

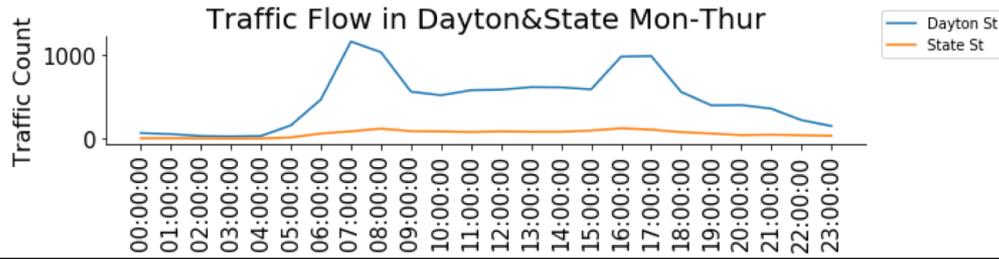

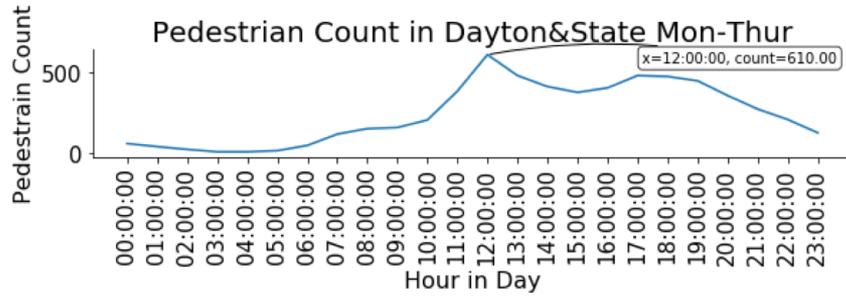

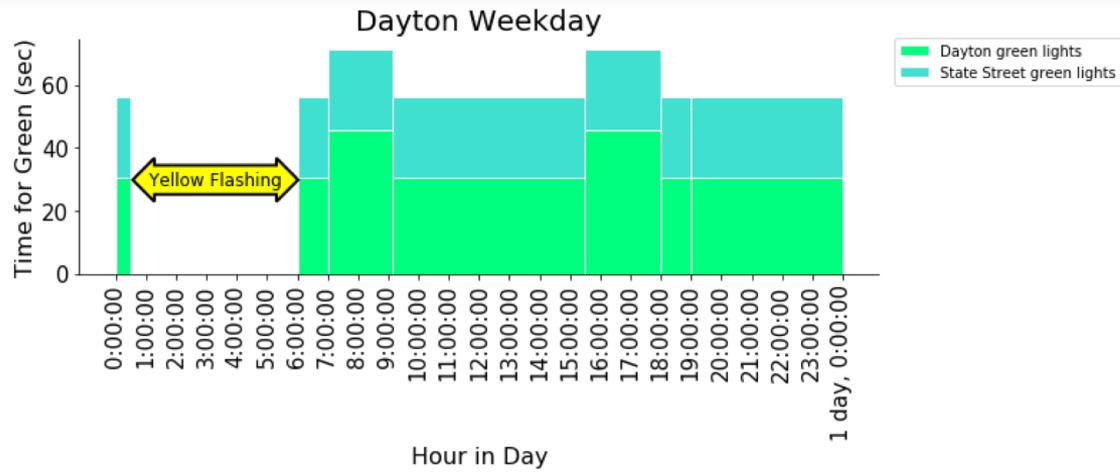

# Johnson/State Street Traffic Lights Pattern

# Light Pattern, Pedestrian and Traffic

1. Light cycle are too long, should adopt shorter and more frequent cycle pattern.
2. Pattern does not align with morning peak (6 - 8 am).

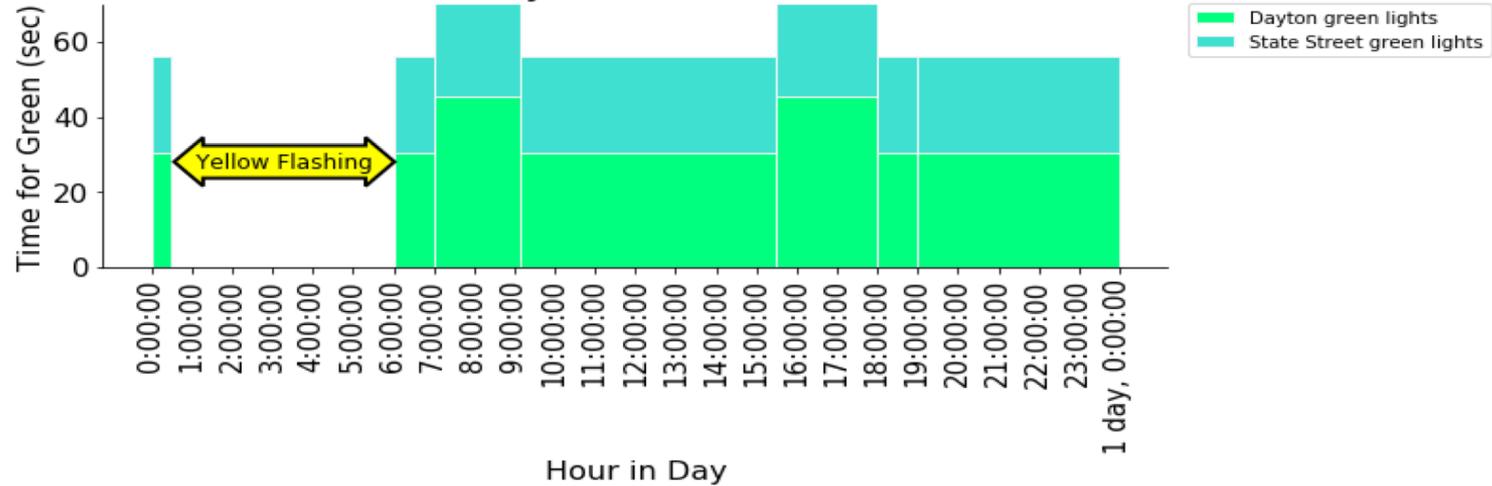

# Metric and Optimization

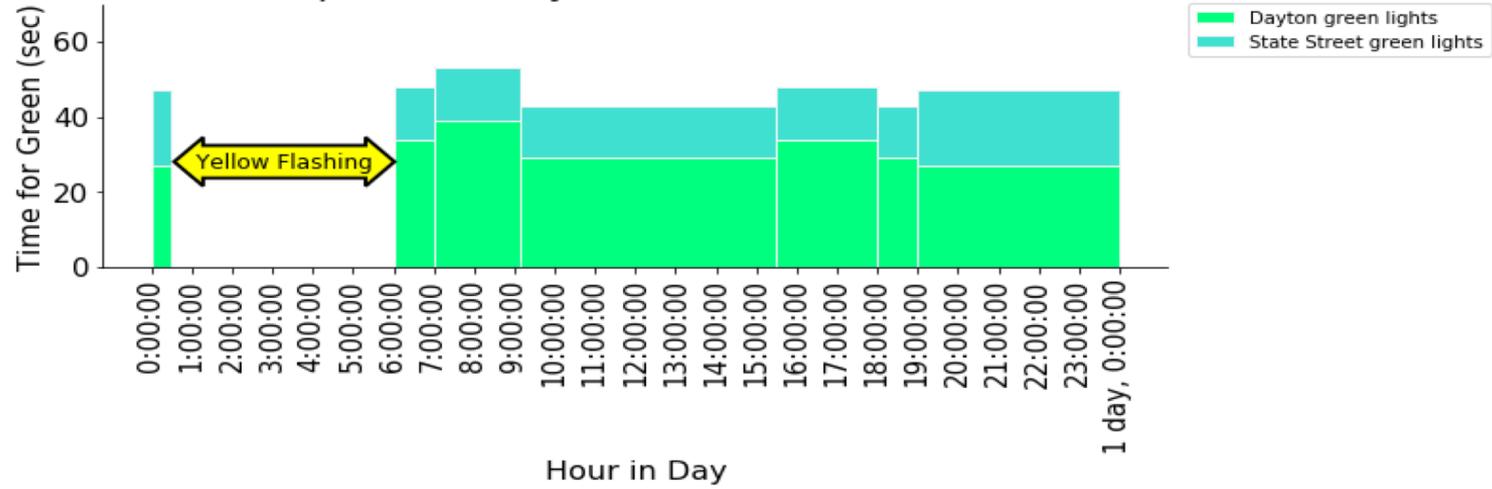

Assumption:

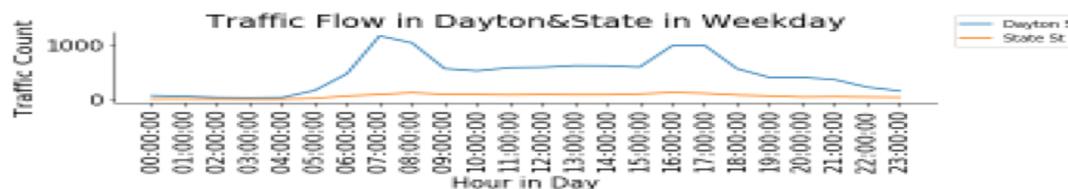

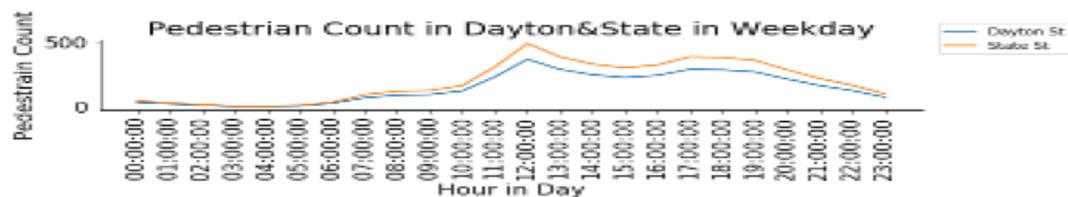

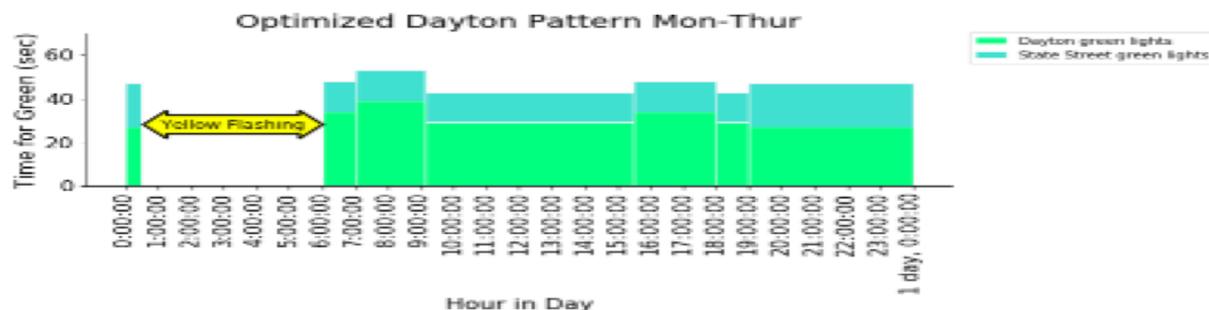

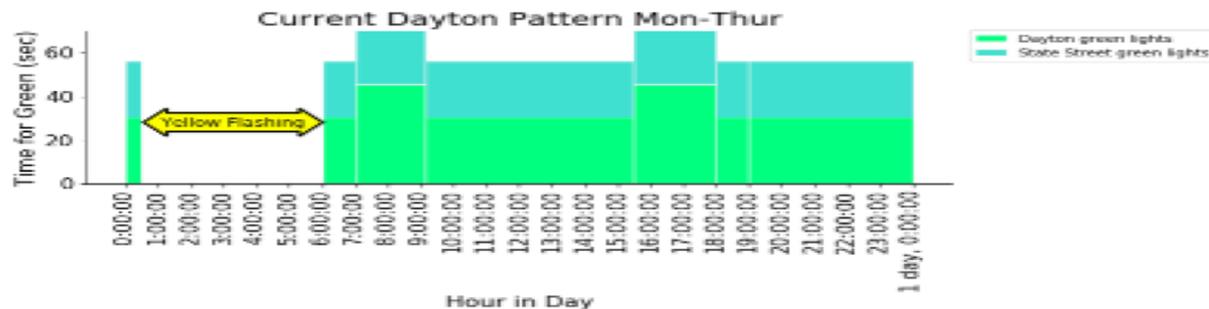

1. 4/5 pedestrian wait for Main Street Red Light,  
3/5 pedestrians will wait for Cross Street Red Light.
1. Every car will pass the intersection in 2 seconds.
2. Pedestrian and Cars come in a constant speed. Uniformly distributed according to time.
3. Define anger index =  $1/3000 * (\text{waiting time})^2$

### Current Dayton Pattern Mon-Thur

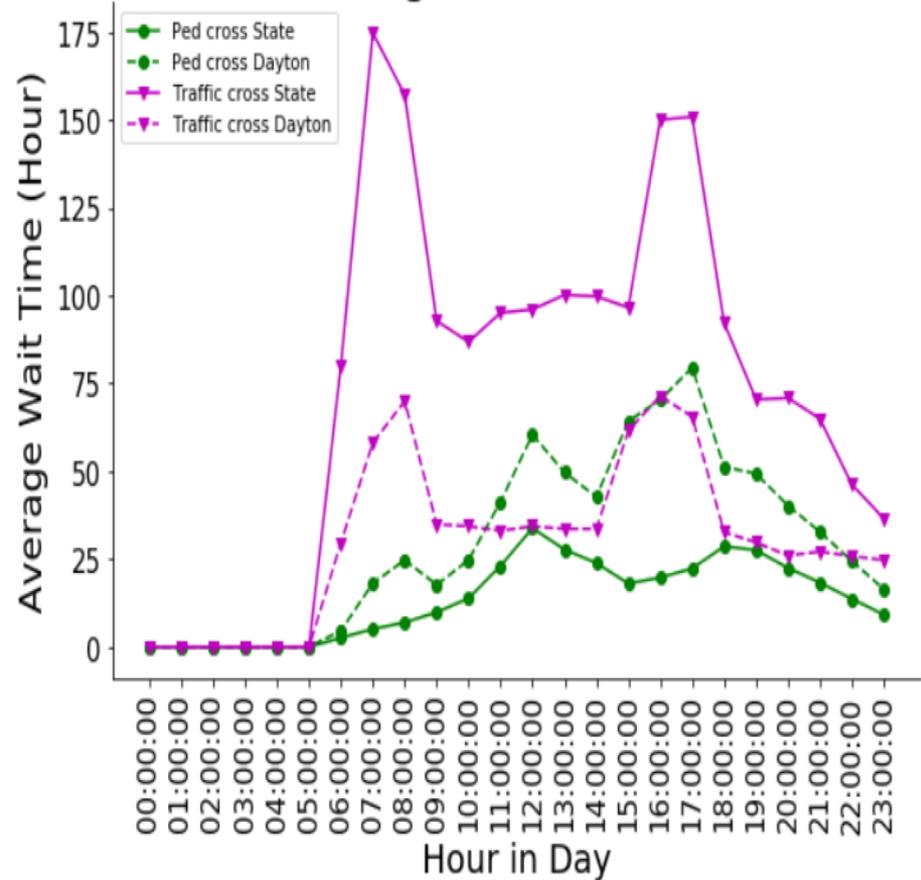

### Optimized Dayton Pattern Mon-Thur

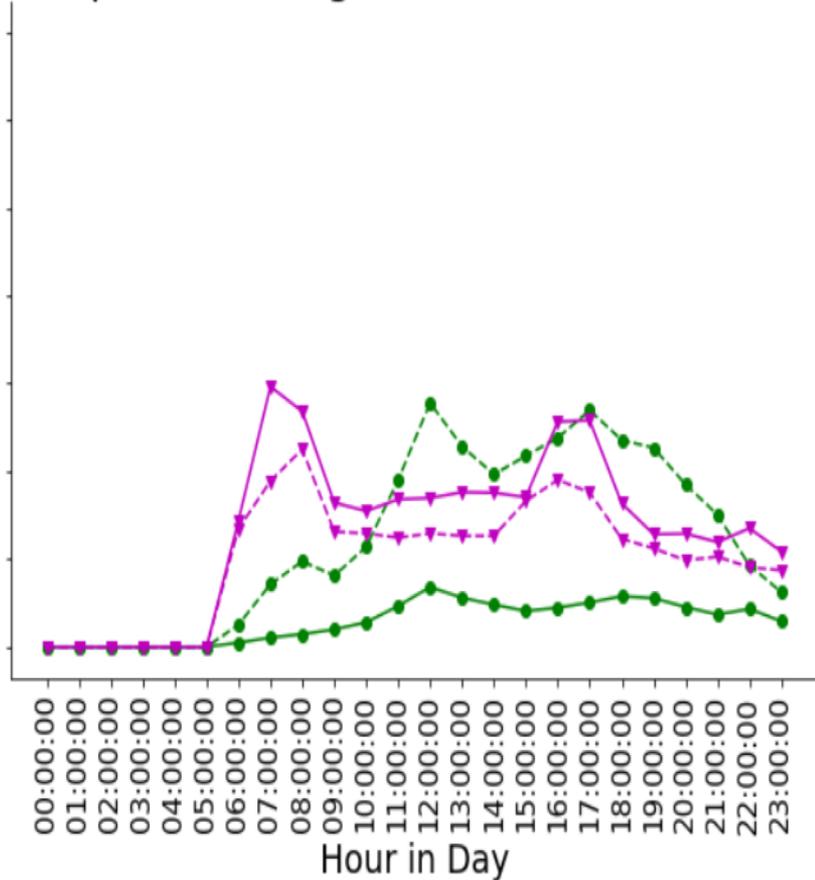

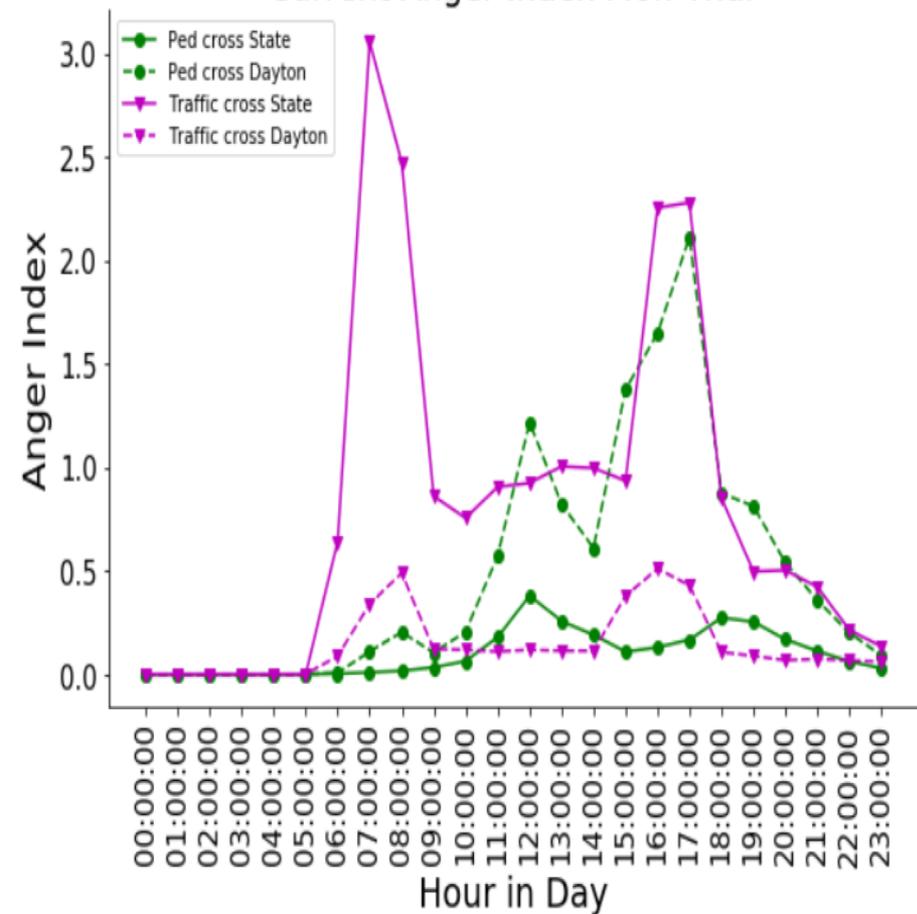

### Current Avg Wait Time Mon-Thur

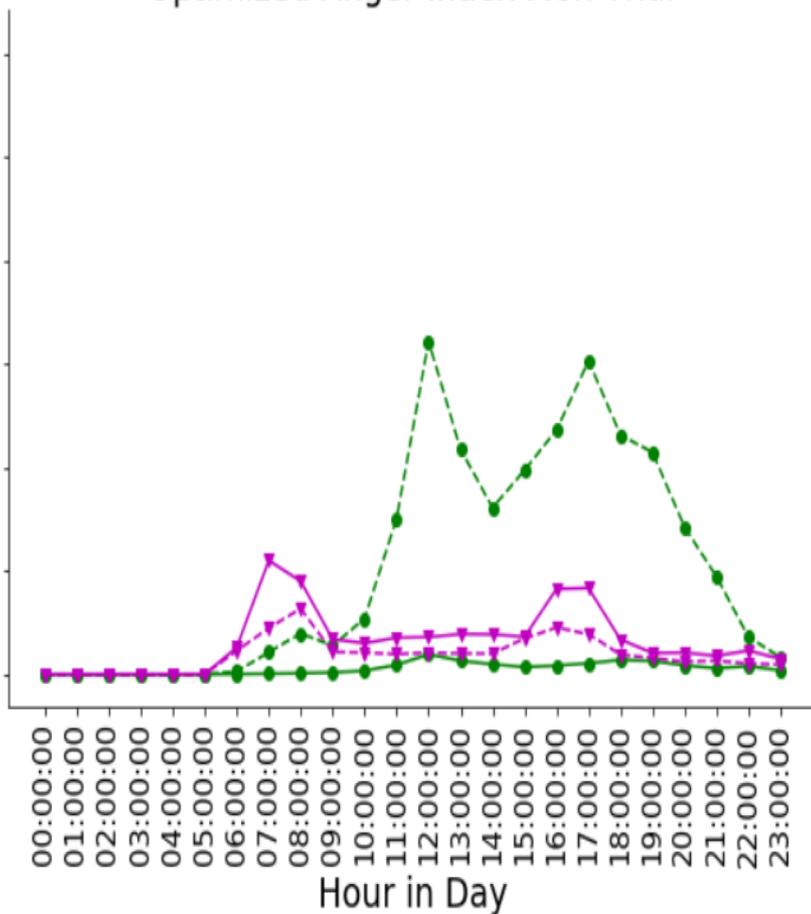

### Optimized Avg Wait Time Mon-Thur

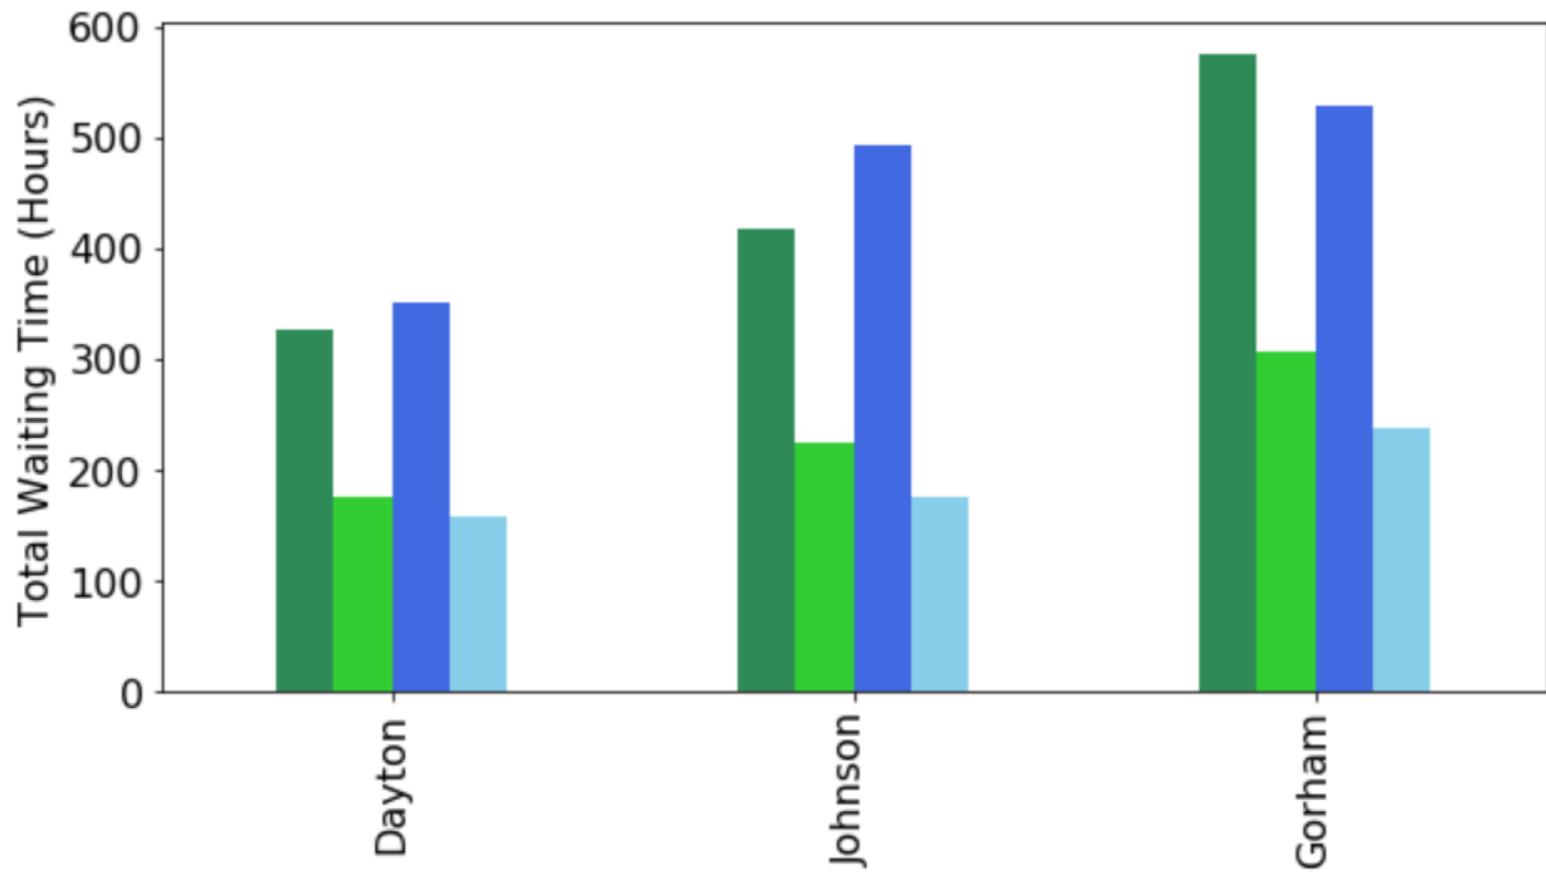

### Current Anger Index Mon-Thur

### Optimized Anger Index Mon-Thur

# Other Considerations Going Forward

1. Bus Patterns
2. Traffic Patterns
